GREEN VS. TAN · BEAR PARK · A DESIGN PASS FOR WYATT · CARD-FPW · OCT 31, 2026

THE FULL PILLOW WALL

The wall now takes the **whole screen**: the same pillows, laid course after course to every edge, with the door, the sign, Emperor Bear's portrait and the ✕ where they are now. Through the cracks you see **dirt** (my pick) or **snow**. **No green is left**: 62 % of your screen today, 0 % after. Paying still drops the door; the whole wall parts and Camp Snugg opens on today's timing.

> YOUR NOTE · 10/31 4:33 PM
>
> "When you are looking at the Bear Park wall, trying to get in, the pillow fort needs to take up the whole screen. There is none of this green area. It should be the full pillow fort. If you really need to see through some of those cracks, it should look like maybe some snow behind it or dirt. Run a design pass for this, and then, if it looks good, I'll approve it. We'll set it live."

Today · your screenshot: a chunk of wall floating in green

The pick · the pillow fort edge to edge, dirt in the cracks, the wall standing on the ground

WHAT SHOWS THROUGH THE CRACKS

Your two ideas, plus a third where nothing shows through. All three at your phone's size.

A · Dirt (my pick). Dark earth in the wall's shadow. The pale pillows stand out against it the way they stand out against today's dark green, so the wall keeps its shape. It is also Camp Snugg's own world: warm, dusty, earthy.

B · Snow. Snow in shade (blue) with white glints, fresh snow underfoot. Gentle and cozy, like the Pillow Fort Snow Globe, but paler overall.

C · Nothing to see through. The cracks are just the pillows' own deep shadow, as if more pillows stood behind. Dirt underfoot.

EVERY SCREEN

Today on the left, the pick on the right. The wall fills every phone and tablet shape.

SMALL IPHONE · TODAY 53 % GREEN → 0 %

Today

The pick

IPAD ON ITS SIDE · TODAY 71 % GREEN → 0 %

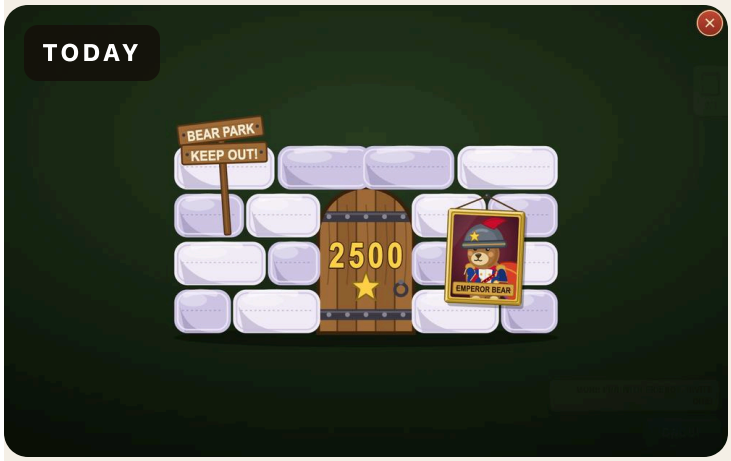

Today

COMPUTER · TODAY 78 % GREEN → 0 %

Today

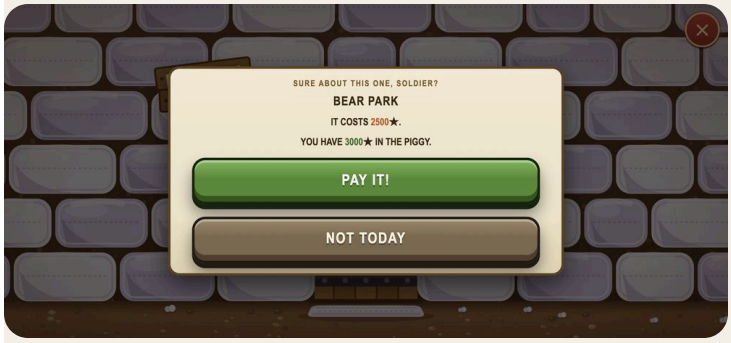

The pick

Snow and the "nothing through the cracks" look at these sizes are in the kit (kit/shots/look).

THE WAY IN

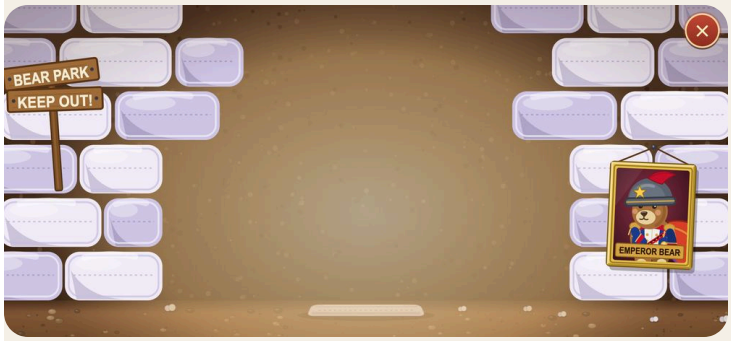

Nothing about paying changes: the same question, the same door, the same timing. Now the whole wall parts.

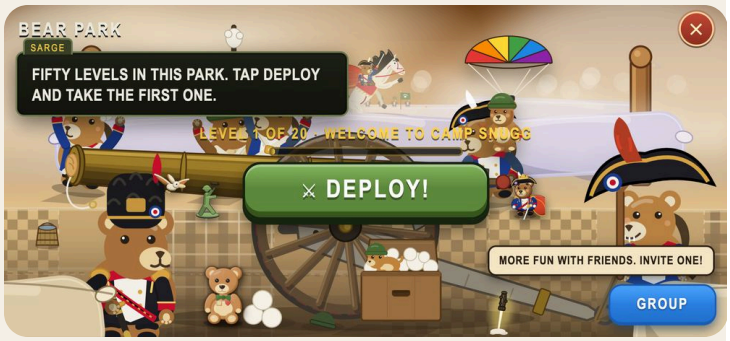

1 · Tap the door. With 2,500★ you get the usual "Sure about this one, soldier?" card over the wall (short of stars, the door shakes as today).

2 · Pay it. The door comes off and falls, as today.

3 · The wall parts. The whole wall slides apart, its new rows with the old ones, and Camp Snugg's warm light comes up between the halves.

4 · Camp Snugg opens at 1.65 s, exactly as today. (The warm light matches its sepia dust.)

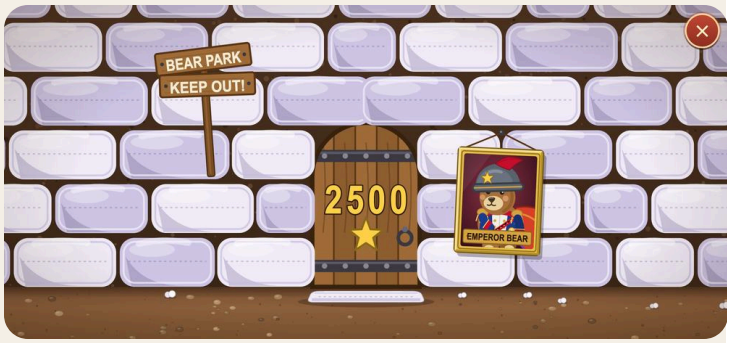

THE SMALL CALLS

Each is built at my pick in the pictures above. One word from you changes any of them.

THE WALL'S FOOT NEAR THE BOTTOM (PICK) OR WHERE IT STANDS TODAY

Foot near the bottom (pick). The ground is a thin strip; the door moves down 18 px on your phone.

Where it stands today. A taller strip of ground. On the iPad it would be a quarter of the screen.

ONE WALL (PICK), NOT A PATCH

One wall (pick). Two edge pillows a side of today's wall are made longer, so its edge steps like the rest of the wall.

Without that: today's wall keeps its straight edge and reads as a block set into the bigger wall (left of the sign).

A SOFT SHADE TOWARD THE CORNERS (PICK)

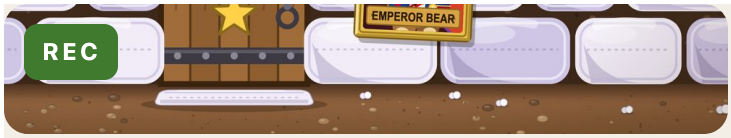

With the soft shade (pick): the eye lands on the door.

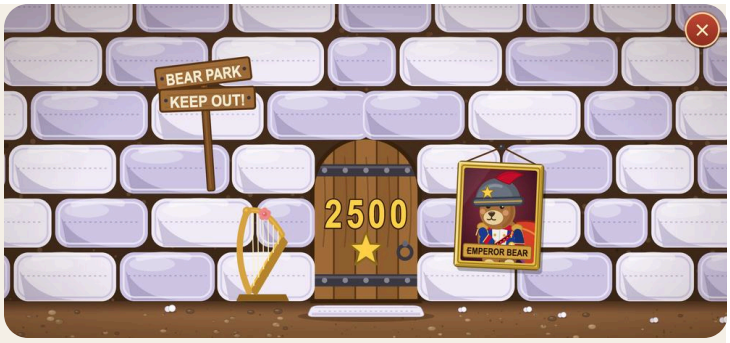

Without it.

THE DOORMAT AND THE STUFFING

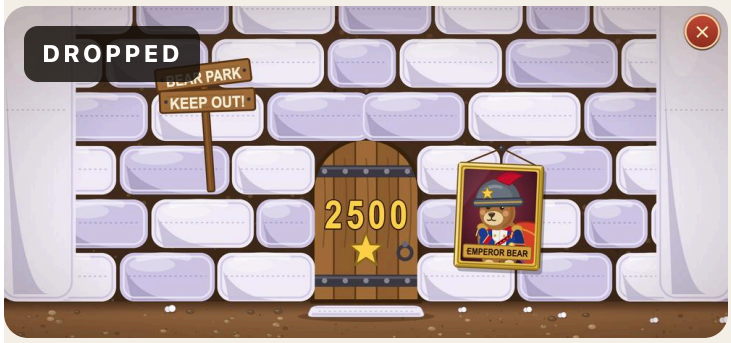

A cushion doormat before the door (the bedroom fort's gate has one) and a few tufts of pillow stuffing on the dirt (picks).

The Golden Harp owner's wall: she stands at the door's left as today.

TRIED AND DROPPED

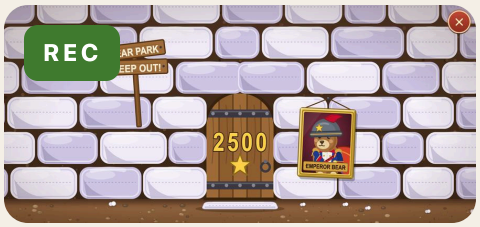

Two round towers at the screen's edges, like the bedroom fort. With their tops off the screen they read as curtains, so I dropped them.

BESIDE ITS NEIGHBOURS

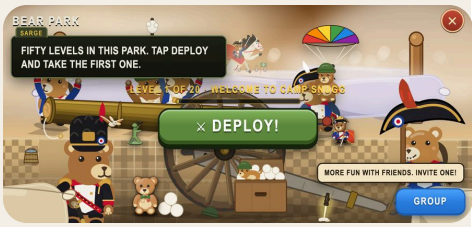

The bedroom fort you tap, the wall, and the park behind it, as the game draws them.

The bedroom: the pillow fort on the bed (BEAR PARK).

The wall (the pick).

Camp Snugg behind it.

The style guide's quick check (Laura's four rules), for the new ground and cracks

- **Soft outlines?** Yes: every new shape's rim is its own colour a shade darker, thin and see-through. The pillows are the game's own.
- **A light top and a deeper foot?** Yes: the ground, the snow drifts, the doormat, the pebbles.
- **Drawn lines still crisp?** Yes: the sign, the portrait's cord and the door are untouched.
- **Rich colour?** The ground and cracks yes (warm earth; blue shade on snow). The pillows keep the fort's pale cream and lilac (a richer pillow would be Laura's pass).
- **Does it look like it lives next to the trike?** It is the game's own pillow, more of it, on ground drawn by those rules.

THE NUMBERS

Measured in Chrome and in WebKit (Safari's engine, your phone's) on today's game (v28.83).

SCREEN	GREEN NOW	AFTER	PILLOWS
Your phone (874×402)	61.7 %	0 %	61
Small iPhone (667×375)	53.1 %	0 %	51
iPad on its side (1180×820)	70.7 %	0 %	77
Computer (1440×900)	77.7 %	0 %	107

THE WAY IN (REAL TAPS)	TODAY	THE PICK
The wall parts (Chrome)	790 ms	787 ms
Camp Snugg opens (Chrome)	1806 ms	1750 ms
Camp Snugg opens (WebKit)	1689 ms	1682 ms
Smoothness while the wall parts (slowest 5 % of frames, CPU slowed 4×)	18.6–19.1 ms	17.7–18.8 ms
Opening the wall (to its 2nd frame, CPU slowed 4×)	60–73.7 ms	89.2–121.6 ms

The open costs about 10 ms more on a real phone (the new pillows' first paint). Chrome and WebKit draw the same wall: their pictures differ by 1.78 levels on average, the same as today's screen does between the two. Nothing threw an error in any run.

YOUR CALLS

Each one is already built at my pick. Say "go with recs" to take them all.

FPW-Q1 · What shows through the cracks?

Pick: Dirt. Or Snow, or nothing (the deep shadow). Dirt keeps the pillows standing out, keeps the colour rich, and matches Camp Snugg.

FPW-Q2 · Where does the wall stand?

Pick: its foot near the bottom (a thin strip of ground). Or where it stands today (a taller strip; a quarter of an iPad).

FPW-Q3 · What do you see as the wall parts?

Pick: Camp Snugg's warm light, then the park, on today's timing. Or Camp Snugg itself behind the halves: a bigger change, its own follow-up card.

FPW-Q4 · The cushion doormat before the door?

Pick: keep it.

FPW-Q5 · The few tufts of stuffing on the dirt?

Pick: keep them.

FPW-Q6 · The soft shade toward the corners?

Pick: keep it.

FPW-Q7 · Make today's wall part of one big wall (two edge pillows a side made longer)?

Pick: yes.

FPW-Q8 · For Laura: the pillows keep the fort's pale cream and lilac.

A richer pillow would be her style-guide pass, on her word. Nothing done.

On your go: one build card (written, not queued) adds the full wall to the game with your choices, a switch to turn it off on a device, and the same checks run again on the real build before it goes live.

Made on Maker 1 (card M2869) from today's game. The pictures are the real game with the new wall drawn over it, in Chrome for Testing and WebKit, muted. The record is design/full-pillow-wall-1031/00-DESIGN-FPW.md and the build card is cards/FPW-B1-full-wall.md.
