

KING CROAK'S HIDEOUT · EVERY UNIT, EVERY DIFFICULTY

What King Croak, his son, the posse, the ladies, the rattlesnake and the stampede do to your men on EASY, MEDIUM, HARD and MEGA, with every body's HP and head-count · read out of the live game v28.88 on Oct 31, 2026 22:19 · every damage number checked on the game's own machines (Chrome 97/97 · WebKit 97/97) · for Raziya

The one thing to know: every hit in the hideout is a **bar hit** (the King Rex page's word): it takes a share of a man's health bar, not a fixed HP. King Croak's and his son's hits **grow with difficulty**: × 1 · 1.1 · 1.1 · 1.2 (EASY · MEDIUM · HARD · MEGA). On **MEGA** (CARD-MKC) everything on his side also hits **twice** as hard and has **six times** the bar, so his strong shot is 4.8 bar hits against 2 on EASY. The bandits, sharpshooters, ladies and rattlesnake hit the same on EASY, MEDIUM and HARD. The stampede and the ladies' fire never change. Only the snake's swallow is a straight **KO**.

THE BOSS LAB fights King Croak with its stock army: Sarge with the saber, the jeep, the plane and 9 men (rifleman, M. gunner, bazooka, mortar, medic, flame, sweeper, radio man, grenadier), at **level 30 on EASY, 33 on MEDIUM, 37 on HARD and 40 on MEGA** (MEGA adds the tank and leaves the grenadier home). At the lab's levels 30, 33 and 37 the stock army reads the same HP and bar, so EASY, MEDIUM and HARD meet the same men (not every rank between: the stock Sarge's saber reads 29 HP at ranks 38 and 39 against 28 at 30–37; the Claymore Sarge and the heroes climb a little); MEGA's level-40 men are one step tougher. The lab fields no hero; the hero rows below show one in command at the same level.

What changed in this fight lately

live since	when	card	what it does in this fight
v27.55	Oct 27	**CARD-MKC · THE MEGA HIDEOUT ×6 / ×2**	On MEGA every body on his side is born with 6 times the bar (King Croak 2,592, each son 546, a lady 66, the snake 864, a bandit or a sharpshooter 18) and every hit they land counts 2 times. Not doubled: the stampede and the ladies' ground fire (they belong to nobody). Measured on both engines.
v28.41 · v28.46	Oct 29 · 30	**CARD-BLB · CARD-BLP · THE BOSS LAB**	The lab fights King Croak with its stock army at level 30 on EASY rising to 40 on MEGA (30 · 33 · 37 · 40). Every "level" number on this page is that army.
v28.65	Oct 30 19:39	**CARD-LRB · ONE HP NUMBER**	Every hit in the hideout is a bar hit, and since v28.65 a bar hit lands a little lighter on tough men: 90 % + 10 % × bar ÷ HP (a level-30 flame takes 0.915 of each, a rifleman 0.933). Before that every man took them whole.
v28.65 + v28.74	Oct 30 · Oct 31 00:11	**CARD-LRB + CARD-HP3 · TENTH-RANK HP**	Extra HP every 10 ranks: M. gunner +1, bazooka +5, grenadier +4, flame +6, commando +5, spy +1. Here it only nudges the share above (a bar hit is a share of the bar, not of the HP).

v28.68	Oct 30 23:31	**CARD-BRB · THE BOMBER**	Your bomber flies in every boss fight now, the hideout included.
v28.57 · v28.58 · v28.61	Oct 30	**CARD-PHG · THE PISTOLS BY THE GRIP**	King Croak (and Jane) hold their pistols by the grip on every drawing. Art only: no number moved.
v28.63	Oct 30 19:04	**CARD-OLR · AL'S DRAWINGS**	Little King Croak's treasure drawing follows Al's character page. Art only.
v28.25	Oct 29	**CARD-LMK · THE BANDIT MASK**	The bandit mask is King Croak's prize now (it swapped seats with the lasso). The fight itself is unchanged.
—	—	**UNCHANGED SINCE OCT 25**	Every hideout dial was compared line by line with the Oct 25 client: King Croak's health and damage tables, his storm, reach, clocks, cover and hunt, the son, the posse, the ladies, the snake, the stampede, the pour and every wave sheet read the same (the only new lines are CARD-MKC, the lab's levels, the share rule and the pistol drawing). CARD-KCT (Oct 16) is his treasure's picture.

How a hit is counted

Your men carry **HP** (the number on their unit sheet) and a **health bar** cut into a few *bar hits*: 5 to 7 for a level-30 man, 7 to 9 at rank 100, 11 for the saber Sarge and 22 with the Claymore, 43 to 101 for a hero. A man is KO'd when the bar hits he has taken fill his bar.

- Every attack in the hideout carries a number of bar hits (the tables below). Since v28.65 a man takes 90 % + 10 % × bar ÷ HP of each: 0.933 for a level-30 rifleman, 0.915 for a flame. Heroes take them whole.
- In HP, one bar hit lands as that man's HP ÷ his bar × his share: 2.8 HP of a level-30 rifleman's 18, 6.25 of a flame's 41. The HP figures on this page are that conversion.
- A man who takes no hit for 4 s mends. Saves still roll on every hit: a jetting or dragged man cannot be touched, the pet shield, the deflect dome, Sarge's and the Commander's absorbs, the saber's block (one in two from rank 20) and the dodges. A man inside the snake's mouth is gone whatever his bar.

The tier dials sit in THE BOSS LAB's RULES for King Croak (KING CROAK HEALTH x, KING CROAK DAMAGE x, his storm's cooldown and reach, THE HIDEOUT POUR): a typed cell is what the next lab fight uses.

Who survives · the lab's own levels

How many of that hit in a row (inside the 4 s mend) KO a fresh man at that tier's lab level (EASY 30, MEDIUM 33, HARD 37, MEGA 40). **KO** = one hit. A storm column counts whole storms (8 volleys); hover a cell for the volleys and the HP.

KO one hit · 2 two · 3 three · 4 four · 5+ five or more · a dot in the corner = measured on the game's own machine in this read · · = not on that tier

HP and bar = the man's sheet HP and his bar at level 30 to 37 · at level 40; a → b in a cell = it rises between level 30 and 37 (a at 30, b at 37; hover for every level): SARGE · CLAYMORE, KING YETI, KING REX, KING CROAK, JANE, EMPEROR BEAR, PRINCESS CROAK. A hero takes bar hits whole, whatever his HP. The snake's swallow is a KO for anyone and is not in the table; the fire column counts beats (0.5 s apart).

The level a man first survives one hit

The lowest rank at which a fresh man lives through one of that hit (what it lands is less than his bar). The small number under each column is the bar hits the hit carries. **Green** = he already does at the lab's level for that tier; — = not even at rank 100; 0 = always.

The four damage columns are bar hits a hit (with the HP that is on the lab's rifleman at that tier's level). HP = each body as the game bore it on that tier through its own wave row (measured in this read; MEGA includes CARD-MKC's × 6). n = bodies in the solo wave sheet (one commander), not counting the pour. leak = lives it costs at the toy box (10 lives). tags = dog tags paid when it falls.

He crouches 0.55 s (the tell), then 8 volleys 0.2 s apart, right hand, left hand. Each volley lands on every man in the cone. Run out of the cone and the rest miss.

King Croak walks on 2 s after the bell, alone; every other wave waits for his bar to cross its gate, and he bolts for cover as it walks on. The stampede opens the fight at 5 s and comes back every 25 s. The hideout has no ULTRA MEGA.

How this was read and checked

The live client v28.88 (index.html md5 1de0910be46cda954034c14925273a12, the build on the Big Mac's main and both mirrors) was opened headless and read with the game's own functions: every table, every tier's wave sheet and bars, the lab's stock army on each tier, every man's bar and HP at every rank. Then each damage number was **measured on the real machines** in a BOSS LAB fight on every tier: every attacker was born through its own wave row (so the tier's and MEGA's stamps were the game's own), stood near men at that tier's lab level and left to its own brain until it hit. King Croak's strong shot and storm, Little King Croak's (and on MEGA a son of the brood's) shot and storm, a bandit's, a sharpshooter's and a lady's round on riflemen, M. gunners, flames and medics, the ladies' fire, the rattlesnake's lunge and swallow, the stampede, and every body's bar as born. Chrome 97/97 · WebKit 97/97 checks passed with zero page errors; the page rebuilt every one of the 393 measured hits from the read and they all agree; the two engines read every number the same.
