017 ROBO-SARGE 3000, the character, in your drawing

From Laura, 11/4/2026: "make this like our last robot, mark as finished and send to jumpr to put in the game." The character still used the old robot. He now has the same drawing as the Robo-Sarge 3000 treasure, everywhere he shows. It is live in client v30.18.

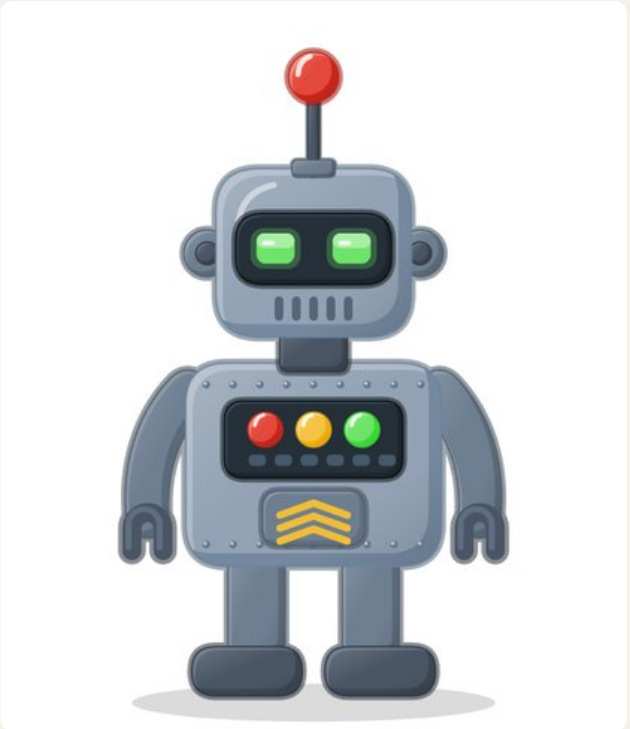

Why he was left behind: the game copied the toy's drawing for the character while it loads, before your treasures swap in. So the fights, the level banner, the next-up card, the boss wall, the Log and the rescue scene kept the old robot while the toy on the rug was already yours.

The character

Tile 017 on the character sheet (ticked Finished / Laura) and the drawing the game now reads for him: your file, whole, in your order, standing in the old robot's place at his size.

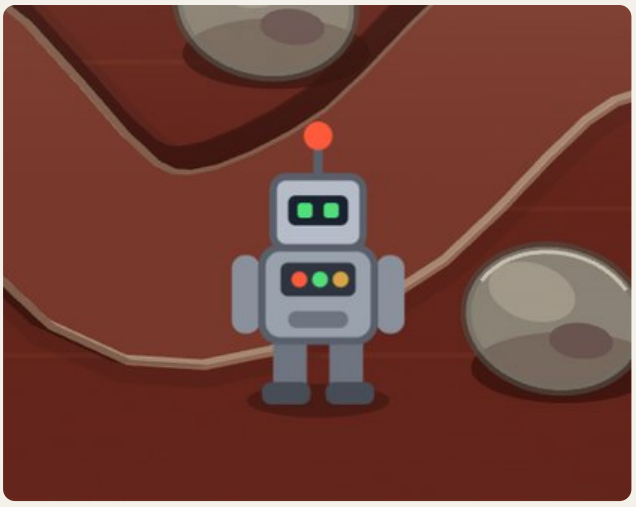

BEFORE (the sheet's picture of 017 today)

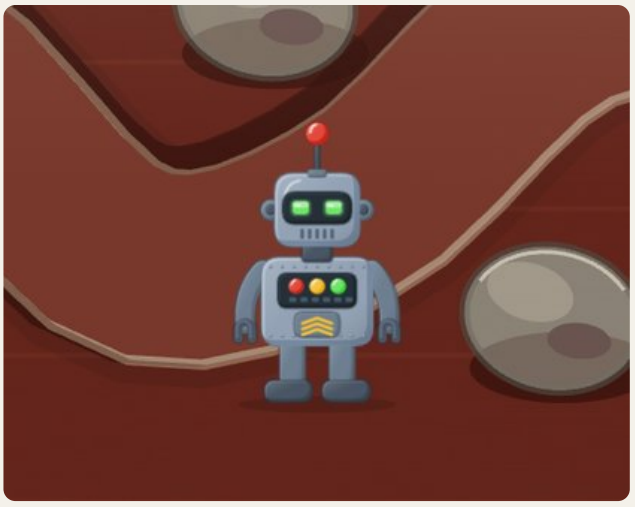

AFTER (your drawing, as the game draws him)

The fight on level 90

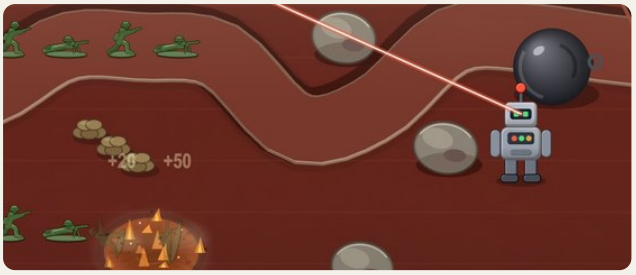

He stands on the old robot's feet at the old size, so his bar, his shadow and every aim hold. His laser still leaves from his visor.

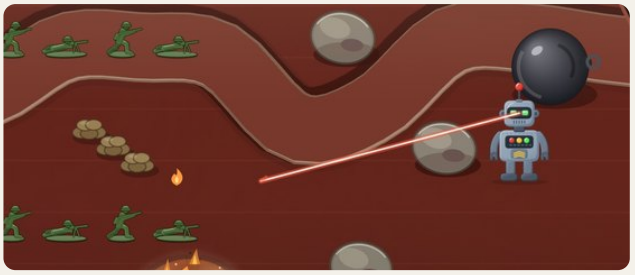

BEFORE (the game today)

AFTER (your drawing)

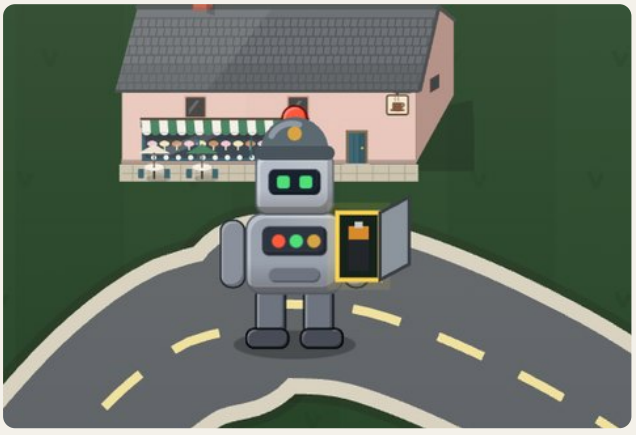

BEFORE (the game today): his laser

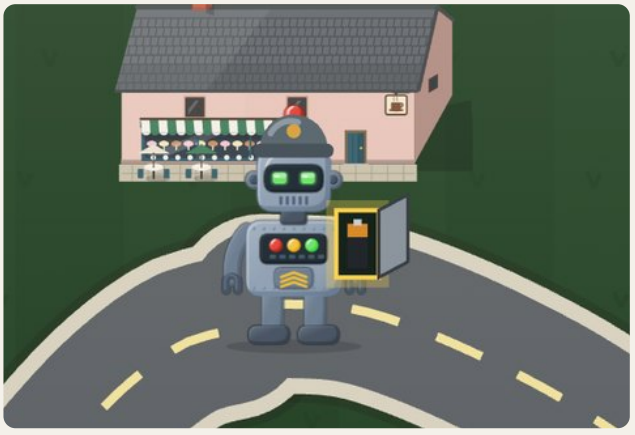

AFTER (your drawing): his laser

Level 205, ROBO-SARGE MARK II

He wears your Sarge's hat and his back hatch opens on his east side. Both sit on your drawing where they sat on the old one.

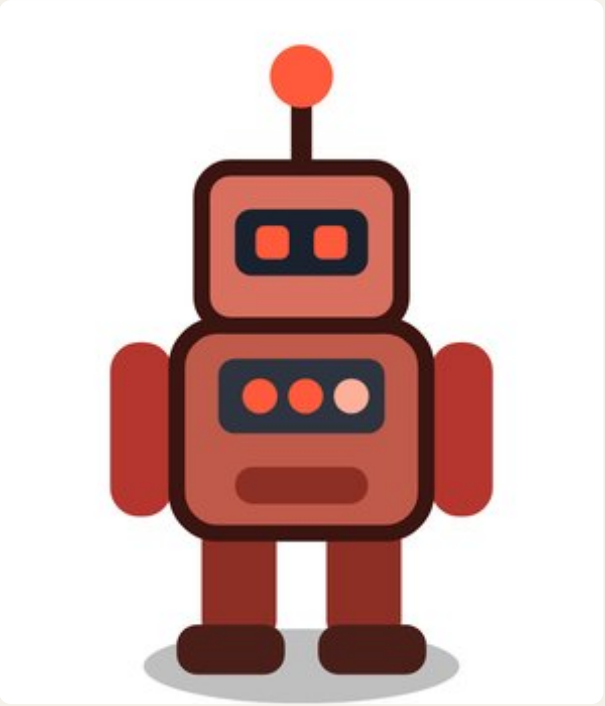

BEFORE (the game today)

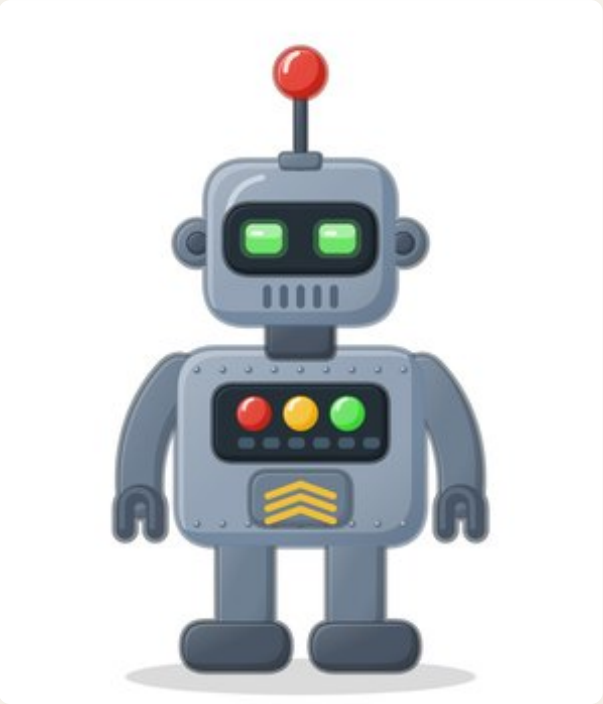

AFTER (your drawing)

The red coat (284 REBOOTED and 299 MEGA NEMESIS)

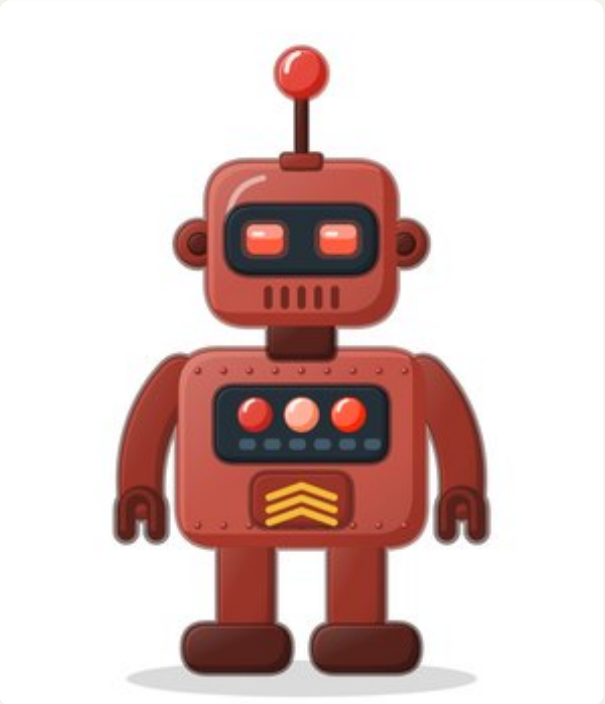

On these two levels the game paints him in Nemesis's red. Since the treasures went live (v30.02) the red found nothing to paint and he came out grey. Now each of your greys goes to Nemesis's red at its own depth, so your light tops and deeper feet stay. Your green eyes and third light go red like his visor, your amber light goes pale red. Your dark glass, your red light, your antenna ball, your gold chevrons and your white glints stay yours.

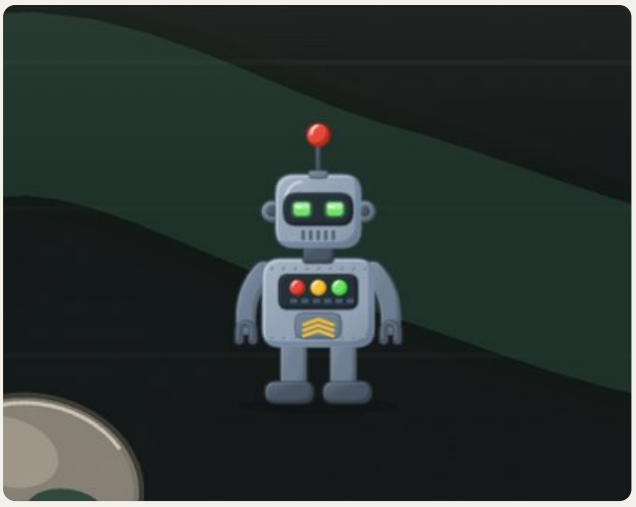

The old red coat (before v30.02)

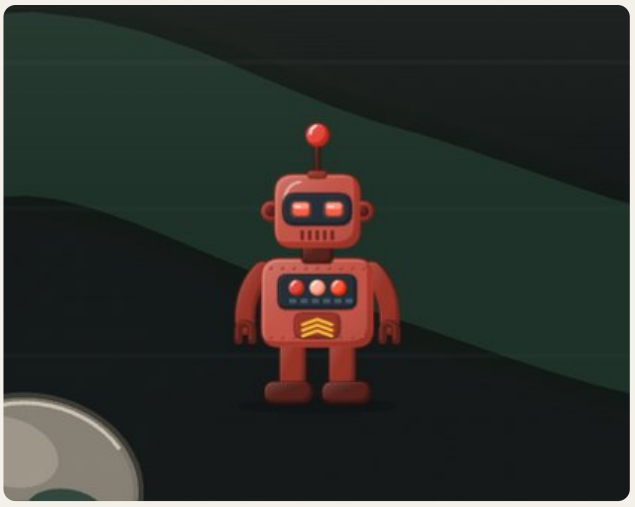

Today (grey: the red is lost)

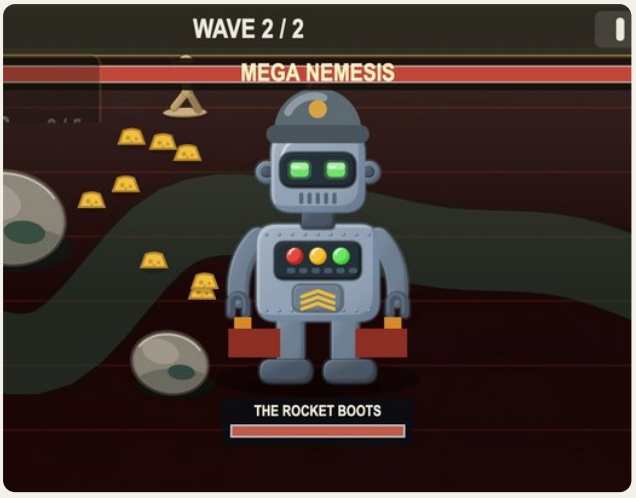

AFTER (your drawing in his red)

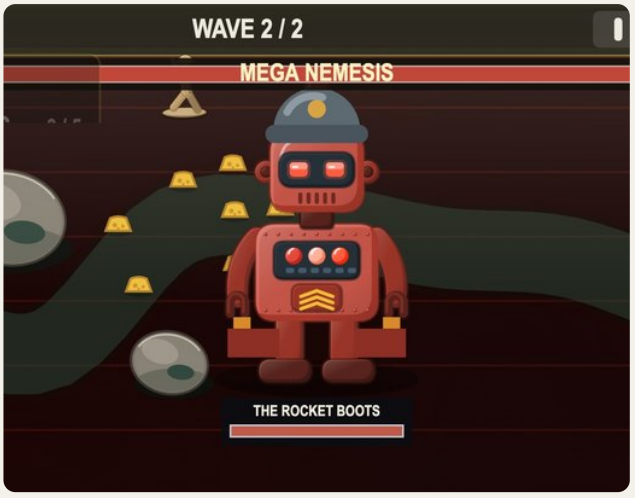

BEFORE (the game today): level 284

AFTER (your drawing): level 284

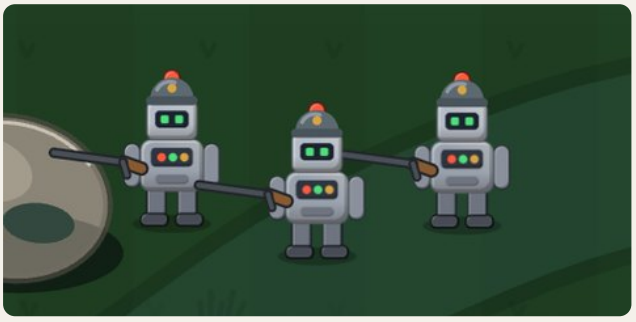

BEFORE (the game today): level 299

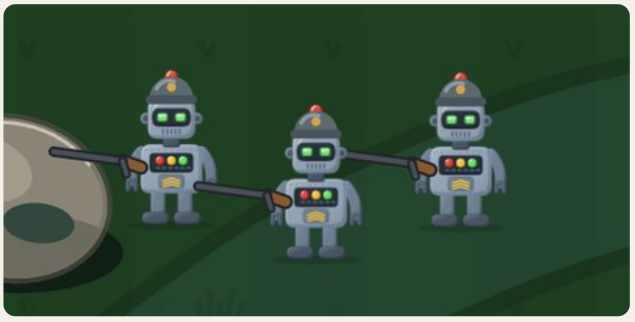

AFTER (your drawing): level 299

The little robots of the third hundred

They are his own picture drawn small, so they follow him.

BEFORE (the game today)

AFTER (your drawing)

The level banner

The big entrance on 90, 180, 205 and 284, and the gold ring on a second visit. This picture is baked once, the way the banner's other bosses were.

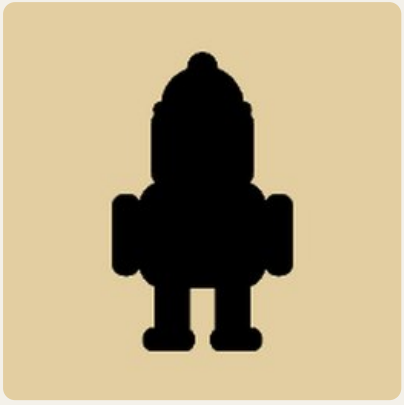

BEFORE (the game today)

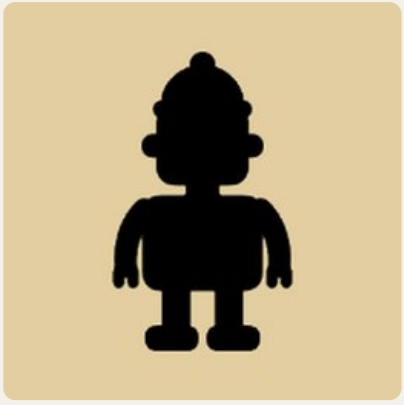

AFTER (your drawing)

The next-up card

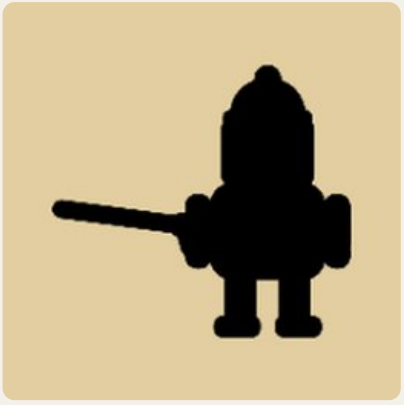

After a win in the third hundred the game shows the next boss and the next new enemy as black shapes to guess. Two of them are his: MARK II in the hat (before 205) and the robot squad (before 262). Both are cut from your drawing now.

BEFORE: the next boss

AFTER: the next boss

BEFORE: the robot squad

AFTER: the robot squad

The boss wall

The third well (top right). A beaten boss shows as a dark carving.

BEFORE (the game today)

AFTER (your drawing)

The Captain's Log

THE FIRST BATTLE, on the campaign's page.

BEFORE (the game today)

AFTER (your drawing)

The rescue after 205, and the suit on 290

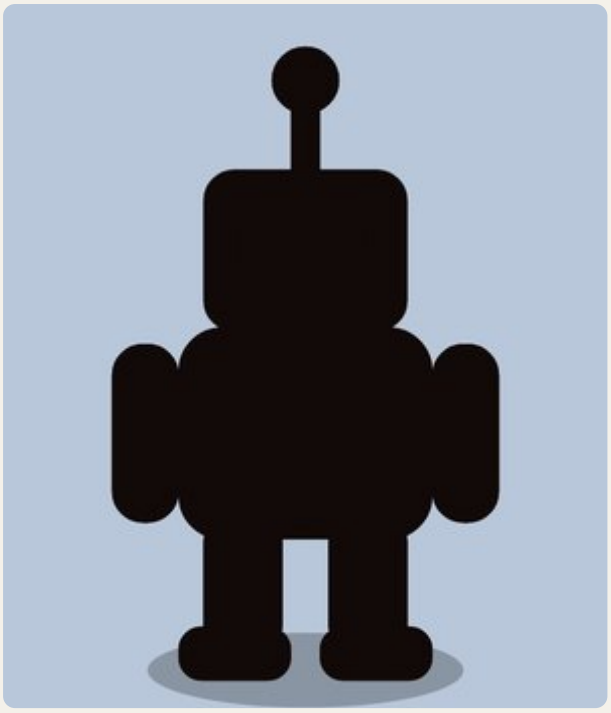

He topples in front of the jar; the little robot on the shelf behind him is the treasure, already yours. On 290 the game shows his shape inked black in the window: your shape now.

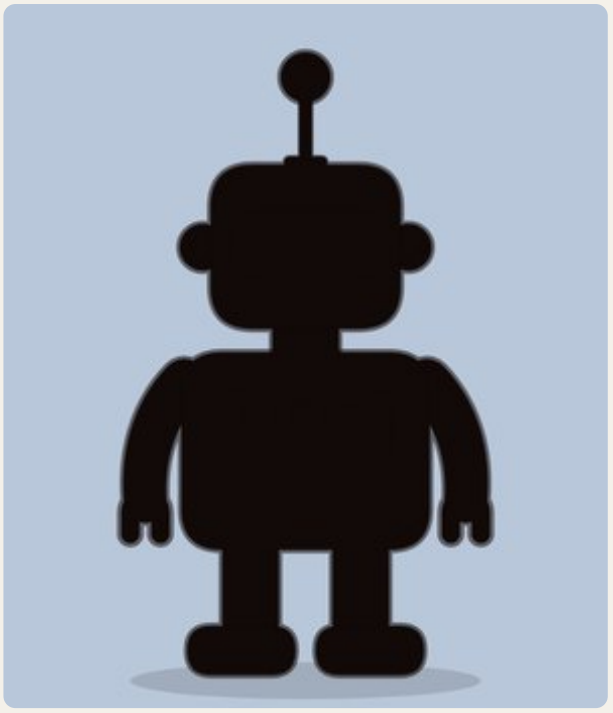

BEFORE (the game today)

AFTER (your drawing)

BEFORE (the suit)

AFTER (the suit)

The comm card

His window when he talks. It already showed the treasure's head; it now reads the character's own drawing.

AFTER

The antenna's lamp

In a fight the game blinks a small red lamp on his antenna four times a second (his old tell; steady under reduced motion). On your ball it looks like this, six times life size.

The lamp off: your ball as drawn

The lamp on

The switch

On one device, `?rbc=0` at the end of the game's address shows the robot as he was before this card, and `?rbc=1` brings yours back. The treasure keeps its own switch (`?ltr=0`). Nothing else in the game changed: no number of his fights, no word, no save.

Questions for you

- **The red coat.** The red on 284 and 299 is your drawing shifted tone for tone. If you would rather draw his red version yourself, send the file and it replaces the shift.
- **The lamp.** The blinking lamp is the game's old flat dot over your ball. Keep it, drop it, or send a lit ball of your own.
- **Your file.** The file for this card is the treasure's drawing with the four white glints a little stronger (0.85 where the treasure has 0.8). The character uses this card's file; the treasure keeps its own. Say if both should carry the same one.

Checked in Chrome and in WebKit (the iPhone's engine): 42 of 42 checks in each, and 42 of 42 on the lighter copy the sites serve. Your path data is in the game byte for byte, so the art page reads 017 as in the game.
