

KING CROAK'S HIDEOUT · EVERY UNIT, EVERY DIFFICULTY

What King Croak, his son, the posse, the ladies, the rattlesnake and the stampede do to your men on EASY, MEDIUM, HARD and MEGA, with every body's HP and head-count · read out of the live game v29.51 on Nov 2, 2026 23:33 EST · every damage number checked on the game's own machines (Chrome 101/101 · WebKit 101/101) · for Raziya

The one thing to know: every hit in the hideout is a **bar hit** (the King Rex page's word): it takes a share of a man's health bar, not a fixed HP. King Croak's and his son's hits **grow with difficulty**: × 1 · 1.1 · 1.1 · 1.2 (EASY · MEDIUM · HARD · MEGA). On **MEGA** (CARD-MKC) everything on his side also hits **twice** as hard and has **six times** the bar, so his strong shot is 4.8 bar hits against 2 on EASY. The bandits, sharpshooters, ladies and rattlesnake hit the same on EASY, MEDIUM and HARD. The stampede and the ladies' fire never change. The snake's swallow is built to KO (it carries his whole bar left + 1, × 2 on MEGA), but since the damper it lands at 50 % like every hit: on MEGA it still KOs anyone; on MEDIUM and HARD a fresh man stands it, and 3 or 4 in a row KO a stock man.

THE BOSS LAB fights King Croak with its stock army: Sarge with the saber, the jeep, the plane and 9 men (rifleman, M. gunner, bazooka, mortar, medic, flame, sweeper, radio man, grenadier), at **level 30 on EASY, 33 on MEDIUM, 37 on HARD and 40 on MEGA** (MEGA adds the tank and leaves the grenadier home). At the lab's levels 30, 33 and 37 the stock army reads the same HP and bar, so EASY, MEDIUM and HARD meet the same men (not every rank between: the stock Sarge's saber reads 29 HP at ranks 38 and 39 against 28 at 30–37; the Claymore Sarge and the heroes climb a little); MEGA's level-40 men are one step tougher. The lab fields no hero; the hero rows below show one in command at the same level.

v29.51	Nov 2 23:30	**CARD-SOK · THE MINIONS SOAK: THE POSSE, THE LADIES AND THE SNAKE BY ROUNDS OF YOUR RIFLEMAN; HIS STORM × 3**	The bandits, the sharpshooters, the ladies and the giant rattlesnake soak a set number of rounds of your rifleman at your commander level: a bandit 4 · 6 · 7 · 9, a sharpshooter 6 · 8 · 9 · 12, a lady 20 · 20 · 20 · 40, the snake — · 120 · 150 · 330 rounds (EASY · MEDIUM · HARD · MEGA; — = the shipped bar). One round of a rifleman at the lab's level (30 · 33 · 37 · 40) is 2.52 · 2.58 · 2.64 · 2.68 HP, so the lab's bodies are a bandit 10 · 15 · 18 · 24 HP (was 2 · 3 · 3 · 18), a sharpshooter — · 21 · 24 · 30 (was — · 3 · 3 · 18), a lady 50 · 52 · 53 · 108 (was 6 · 6 · 6 · 66), the snake — · 309 · 395 · 882 (was — · 120 · 144 · 864); the pour's bandits and sharpshooters take the same number. A party of two or more counts the rounds at the fight's reference level (75 on EASY · MEDIUM · HARD, 115 on MEGA); on MEGA the MEGA hideout rules' × 6 sits inside each row, so the number lands on a multiple of 6. King Croak's storm (and his son's) lands every volley × 3 at the door: 1.125 · 1.238 · 1.238 · 2.7 bar hits a volley (were 0.375 · 0.413 · 0.413 · 0.9), a whole storm 9 · 9.9 · 9.9 · 21.6 (were 3 · 3.3 · 3.3 · 7.2); his strong shot, the posse's and the ladies' rounds, the snake's lunge and the stampede as they were. The cells live in the Boss Lab's RULES (three rows for the hideout: the rounds, the party's level, the storm's factor), editable there like every rule.

v29.41	Nov 2 18:12	**CARD-DHP · THE BAZOOKA'S AND COMMANDO'S TENTH-RANK HP DOUBLED, SHOTGUN SARGE'S +20**	The bazooka and the commando gain 10 HP every ten ranks (was 5): at the lab's level 30 the bazooka has 47 HP (was 32) and the commando 55 (was 40); at level 40 the bazooka 60 (was 40) and the commando 69 (was 49). Sarge with the shotgun in his hands gains 20 HP every 10 shotgun ranks: 88 HP at level 30 (was 28), 112 at level 40 (was 32); his other irons are as they were. A bar hit is a share of the bar, so WHO SURVIVES moves only where the smaller share crosses a whole hit; the HP a hit costs them (the table in HP) rises with their HP.
v29.40	Nov 2 18:04	**CARD-FLT · THE FLAME'S TENTH-RANK HP TRIPLED THROUGH LEVEL 50**	The flame's tenth-rank HP through level 50 pays 18 a rung instead of 6 (the rungs above 50 still 6): at the lab's level 30 the flame has 77 HP (was 41), at level 40 he has 99 (was 51). His share of a bar hit is 0.908 now (was 0.915), so WHO SURVIVES moves only where that crosses a whole hit; the HP a hit costs him (the table in HP) rises with his HP.
v29.37	Nov 2 16:50	**CARD-RXT · THE DESIGNERS' TIME-TO-KILL CHART**	King Croak's bar for one commander on EASY · MEDIUM · HARD is the chart's number, a stock roster's fire for 15 · 20 · 30 s: 2,252 · 3,003 · 4,504 (was 160 · 192 · 240: the base × the tier's dial); the son's bar rides the same rows: 315 · 420 · 631 (was 22 · 27 · 34). A party's bar is still the solo bar × 1 + 0.9 × (commanders − 1), exact on these tiers; every hit he lands is unchanged, so WHO SURVIVES moved only with the four men's HP above.
v29.30	Nov 2 15:46	**CARD-PDT · THE PLAYER-DAMAGE-THRESHOLD PASS (MEGA)**	King Croak's MEGA bar for one commander is the pass's table number, 5,535, written as the wave row's multiplier to four decimals; the MEGA hideout rules' × 6 lands after the rounding, so the bar born is 5,532 (was 2,592). The son's row rides with his father's: 1,164 (was 546); the brood's four keep 546 each. A party's MEGA bar lands 7 to 29 HP over the solo bar × 1 + 0.9 × (commanders − 1) (the × 6 after the rounding). EASY · MEDIUM · HARD went to the chart (the row above).
v29.17	Nov 1 23:53	**CARD-DMP · THE DAMPER**	Every enemy blow on your men lands at 50 % in the campaign and the boss fights (the damper takes 50 % off on every tier: read from the game and measured in this fight's lab fight), so a man stands about twice the blows he did: every survive, first-survive and HP number on this page counts it; the bar hits a hit carries are unchanged. The snake's swallow goes through the same door: on MEDIUM and HARD a fresh man now stands it; on MEGA it still KOs.
v27.55	Oct 27	**CARD-MKC · THE MEGA HIDEOUT ×6 / ×2**	On MEGA every body on his side is born with 6 times the bar (King Croak 5,532, the first son 1,164, each of the brood 546, a lady 108, the snake 882, a bandit 24, a sharpshooter 30: since v29.51 THE MINIONS SOAK sets those four (its row), the × 6 inside each row, so each lands on a multiple of 6) and every hit they land counts 2 times. Not doubled: the stampede and the ladies' ground fire (they belong to nobody). Measured on both engines.
v28.41 · v28.46	Oct 29 · 30	**CARD-BLB · CARD-BLP · THE BOSS LAB**	The lab fights King Croak with its stock army at level 30 on EASY rising to 40 on MEGA (30 · 33 · 37 · 40). Every "level" number on this page is that army.
v28.65	Oct 30 19:39	**CARD-LRB · ONE HP NUMBER**	Every hit in the hideout is a bar hit, and since v28.65 a bar hit lands a little lighter on tough men: 90 % + 10 % × bar ÷ HP (a level-30 flame takes 0.908 of each, a rifleman 0.933). Before that every man took them whole.
v28.65 + v28.74	Oct 30 · Oct 31 00:11	**CARD-LRB + CARD-HP3 · TENTH-RANK HP**	Extra HP every 10 ranks: M. gunner +1, bazooka +10 (was +5), grenadier +4, flame +18 through level 50 and +6 above it (was +6 at every rung), commando +10 (was +5), spy +1; Sarge with the shotgun in his hands +20 every 10 shotgun ranks (the rows above). Here it only nudges the share above (a bar hit is a share of the bar, not of the HP).
v28.68	Oct 30 23:31	**CARD-BRB · THE BOMBER**	Your bomber flies in every boss fight now, the hideout included.

live since	when	card	what it does in this fight
v28.57 · v28.58 · v28.61	Oct 30	**CARD-PHG · THE PISTOLS BY THE GRIP**	King Croak (and Jane) hold their pistols by the grip on every drawing. Art only: no number moved.
v28.63	Oct 30 19:04	**CARD-OLR · AL'S DRAWINGS**	Little King Croak's treasure drawing follows Al's character page. Art only.
v28.25	Oct 29	**CARD-LMK · THE BANDIT MASK**	The bandit mask is King Croak's prize now (it swapped seats with the lasso). The fight itself is unchanged.
—	—	**STILL THE SAME SINCE OCT 25**	Compared line by line with the Oct 25 client on Oct 31 and read again on v29.23 and v29.51: his storm's reach and clocks, cover, the hunt and the break, the bar hits the king's and the son's shots, the posse, the ladies, the snake and the stampede carry, the pour and every wave sheet's head-count read the same; what moved is in the rows above (the posse's, the ladies' and the snake's bodies and the storms' landing since v29.51, the bars, four men's HP, the damper). His treasure's picture (Oct 16) and your hero King Croak's extra HP (v28.93: his row among the heroes) are the only other lines.

How a hit is counted

Your men carry **HP** (the number on their unit sheet) and a **health bar** cut into a few *bar hits*: 5 to 7 for a level-30 man, 7 to 9 at rank 100, 11 for the saber Sarge and 22 with the Claymore, 43 to 152 for a hero. A man is KO'd when the bar hits he has taken fill his bar.

- **THE DAMPER** (since v29.17): every hit an enemy lands on your men, Sarge and the heroes in the campaign and the boss fights lands at **50 %** of the bar hits it carries (the game takes 50 % off on every tier, read on every tier of this fight and measured in its lab fight); every survive, first-survive and HP number on this page counts it.
- Every attack in the hideout carries a number of bar hits (the tables below). Since v28.65 a man takes 90 % + 10 % × bar ÷ HP of what lands: 0.933 for a level-30 rifleman, 0.908 for a flame. A hero takes all of what lands.
- In HP, one bar hit lands as that man's HP ÷ his bar × 50 % (the damper) × his share: 1.4 HP of a level-30 rifleman's 18, 5.82 of a flame's 77. The HP figures on this page are that conversion.
- A man who takes no hit for 4 s mends. Saves still roll on every hit: a jetting or dragged man cannot be touched, the pet shield, the deflect dome, Sarge's and the Commander's absorbs, the saber's block (one in two from rank 20) and the dodges. The snake's swallow is built to KO (it carries his whole bar left + 1, × 2 on MEGA), but since the damper it lands at 50 % like every hit: on MEGA it still KOs anyone; on MEDIUM and HARD a fresh man stands it, and 3 or 4 in a row KO a stock man (measured: a fresh level-33 flame on MEDIUM took 3.2 of his 6 bar hits and stood).

HP and bar = the man's sheet HP and his bar at level 30 to 37 · at level 40; a → b in a cell = it rises between level 30 and 37 (a at 30, b at 37; hover for every level): SARGE · CLAYMORE, KING YETI, KING REX, KING CROAK, JANE, EMPEROR BEAR, PRINCESS CROAK. A hero takes all of what lands, whatever his HP. The snake's swallow is not in the table: built to KO (it carries his whole bar left + 1, × 2 on MEGA), but since the damper it lands at 50 % like every hit: on MEGA it still KOs anyone; on MEDIUM and HARD a fresh man stands it, and 3 or 4 in a row KO a stock man; the fire column counts beats (0.5 s apart).

The level a man first survives one hit

The lowest rank at which a fresh man lives through one of that hit (what it lands is less than his bar). The small number under each column is the bar hits the hit carries (it lands at 50 % of that, × his share). **Green** = he already does at the lab's level for that tier; — = not even at rank 100; 0 = always.

HP = each body as the game bore it on that tier through its own wave row (measured in this read; MEGA includes CARD-MKC's × 6; since v29.51 THE MINIONS SOAK sets the posse's, the ladies' and the snake's bodies to rounds of your rifleman at the lab's level, 30 · 33 · 37 · 40: a bandit 4 · 6 · 7 · 9, a sharpshooter 6 · 8 · 9 · 12, a lady 20 · 20 · 20 · 40, the snake — · 120 · 150 · 330 rounds; WHAT CHANGED has the HP). n = bodies in the solo wave sheet (one commander), not counting the pour. leak = lives it costs at the toy box (10 lives). tags = dog tags paid when it falls.

Read from the game's own wave sheet with 1, 2, 3, 4, 5 and 10 commanders in the fight. EASY · MEDIUM · HARD: the solo bar × 1 + 0.9 × (commanders – 1), to the HP; MEGA: the × 6 lands after the rounding, so a party's bar is 7 to 29 HP over that. Outside the lab, the Mission Board's Day-4 order raises the MEGA king's bar × 2.5 and his storm's reach × 2 for that day's fight.

How this was read and checked

The client v29.51 (index.html md5 1b4f4ca9334d9a6a3f8cca769e13e847, HEAD's client on the Big Mac's main) was opened headless and read with the game's own functions: every table, every tier's wave sheet and bars, the lab's stock army on each tier, every man's bar and HP at every rank. Then each damage number was **measured on the real machines** in a BOSS LAB fight on every tier: every attacker was born through its own wave row (so the tier's and MEGA's stamps were the game's own), stood near men at that tier's lab level and left to its own brain until it hit. King Croak's strong shot and storm, Little King Croak's (and on MEGA a son of the brood's) shot and storm, a bandit's, a sharpshooter's and a lady's round on riflemen, M. gunners, flames and medics, the ladies' fire, the rattlesnake's lunge and swallow, the stampede, and every body's bar as born; on every tier the damper's share the lab fight takes off, and on every landed hit the damper's one seat. Chrome 101/101 · WebKit 101/101 checks passed with zero page errors; the page rebuilt every one of the 384 measured hits from the read and they all agree; the two engines read every number the same.
